This course is suitable for complete beginners to the field of economics, green issues and green economics and for intermediate levels. No prior knowledge of economics is assumed. We also regularly have all the way up to Professor in Economics levels on the course and they all enjoy it, many end up writing in our books and journals and generally have a good time during the course and make many friends.

Every training course participant at the end of the training course will receive a Certificate of Participation

During training course these subjects will be covered:

- Understanding The Green Economy. Latest developments in the green economy. Lower growth economics
- Do we need economics for environment or for business or business for environment. Competing claims and competing solutions.
- Theory vs Fact and Reality today.
- The costs of biodiversity loss and the costs of the current mass extinction of species. Will humans survive this one?
- Green Economics and Social and Environmental justice
- Understanding topical narratives of environmental economics and green economics
- What is economics for? Political or mathematical economy?
- What skills do economists really need? What skills do greens need? What is a green economist?
- Green Jobs and Green Careers.
- Green Perspectives on eco innovation and case studies
- Green Economics and climate change – narratives
- Poverty, Gender equality, Access, Biodiversity loss
